◆ Days when high tide is above Mean High Water Perigeal Spring tide level. There may be an increased risk of flooding if high tides are close to, or above, this level.

The tide predictions for Kosrae is based on a limited dataset of eight harmonic constituents derived from the global tide model of Andersen (2006). The estimates do not account for meteorological effects on water levels. Tide levels are not relative to any datum. Times are local standard time, based on UTM+11 hrs. Times are likely to be accurate to about +/- 30 minutes.

**Disclaimer:** This tide data are not intended for use in piloting or engineering design. We make no representation regarding the accuracy of the tide predictions, the use of which they may be put or the results to be obtained from the predictions. Accordingly we accept no liability for any loss or damage (whether direct or indirect) incurred by an person through the use or reliance of these predictions.
