

The Coral Reef & Coastal Erosion

The coral reef is a vital part of Kosrae's natural coastal defenses. A healthy coral reef prevents large waves from reaching the shoreline and will help protect Kosrae from the effects of future sea level rise.

Pollution, such as oil & sewage, sediment from rivers and illegal fishing methods all have a harmful impact on coral reefs.

Help prevent coastal erosion by minimizing activities which have a detrimental impact on the coral reef.

For more information contact the Development Review Commission in Tofol on 370 2076.
